

Conversing in English

Language is a medium of expression through which you convey your thoughts, ideas or express your feelings & emotions. Different languages are used by the people across the world to communicate. The easiest form of expressing ourselves is through our Mother tongue. We all have mastered it without assistance from any external agency.

Over the years, English language has acquired prominence and won global recognition. In this context, we need to inculcate good communication skills among students; encourage them to read and write in English.

The mastery over the language brings forth innumerable benefits. As English is the first language spoken by people of the top nations, it has now been recognized as the business language. Science, Computer, Economics in fact there is no field where English language has not touched or shown its dominance.

So, it is highly important to develop the art of conversing in English. Children gain confidence & feel a sense of self-worth. They feel superior over others and gear up to take on any challenges that come their way.
